

**System** *////* dedalo

## System

After a decade and half of developing effects, we set ourselves the challenge of designing a line of beautiful pedals simplified to their essence, purifying the functions and sound, and aiming at complexity based on the combinations between them. This is how Dedalo System was born.

## T57 / Tremolo

A super-profound tremolo pedal, capable of cutting even before high doses of distortion, but very sweet when you soften the depth.

Features:

- Analog signal path
- Click-free trapezoidal LFO waveform
- Up to 60dB of depth
- Amplitude modulation by FET
- True Bypass

## Controls

- 01 - RATE** Frequency of LFO. Range: 2hz to 12hz.
- 02 - DEPTH** Depth of the amplitude modulation. Range: 0dB a 60dB.
- 03 - TRIM** Output level.
- 04 - INPUT** Effect input, connect your instrument here.
- 05 - OUTPUT** Effect output, connect your amplifier here.
- 06 - DC 9V** Power supply input, connect your dc adapter here.
- 07 - LED** Lights up when the effect is engaged.
- 08 - TRUE BYPASS** Turns on/off the effect. The true bypass switch keeps your sound intact when the effect is off.

## Suggested effects chain

## Technical specifications

Model 2018 – T57 System

Powered by 9v DC adapter, center negative (not included) (min. 100mA)

Input impedance: 750Kohm

Dimensions of the pedal: 11cm x 6.5cm x 5.5cm (Length/Width/Height)

Weight: 320gr

## Use and care of the pedal

- Use only regulated 9v dc adapter, with negative center polarity. In no way should be connected to 220V or adapters of other kinds.
- Avoid dropping, hitting or exposing the pedal to extremes of humidity or temperature.
- To clean the pedal, use a dry cloth.
- Do not remove the protective silicone legs, they protect the pedal from shocks and external pressures.

## Problems and solutions

- *The LED lights up but there is only sound when the effect is in bypass:*  
Make sure the instrument is properly connected to the INPUT jack, and the amplifier to the OUTPUT jack.
- *The indicator LED doesn't light up:*  
The pedal is not connected to an appropriate DC adapter.
- *The indicator LED doesn't light up, and when connecting the pedal, the power supply/other pedals turn off:*  
Check that the DC plug doesn't have metallic parts that may touch the case of the pedal.
- *The effect is too weak, or the sound is unduly saturated:*  
Use an appropriate DC adapter. If the pedal is connected in a loop, check its send and return levels.
- *The pedal makes a low pitched hum:*  
Feed the pedal with a regulated dc adapter of sufficient amperage
- *The sound cuts out intermittently:*  
Check the condition of the input and output cables.

## Terms of warranty

- The warranty is only valid for the original owner for 2 years from the date of purchase.
- The warranty must be requested on the trade where the pedal was acquired.
- DEDALO ensures that the pedal is free from defects in materials and workmanship.
- DEDALO will choose to repair or replace any faulty piece on the pedal at its sole option.
- Failures due to accident or misuse are not covered in the warranty.
- DEDALO is not responsible for any loss or damage the user may suffer as a result of using the pedal.
- Power adapter not included in the warranty.
- In this pedal there is no piece that could be repaired by the user. The repair or modification by personnel not authorized by DEDALO will void the warranty.
- Shipping or other fees that may arise, are not covered by warranty.
